INSIGHTS NEWSLETTER – DECEMBER 2023

DISCLAIMER

Please note that the information provided in this newsletter regarding historical profit/losses from racing investments is for informational purposes only. It should not be considered as financial or investment advice.

Investing on horse and greyhound racing involves a degree of risk, and past performance is not necessarily indicative of future results. The outcomes of horse races are subject to various factors and uncertainties that can influence the results.

We strongly encourage all readers to exercise caution and to bet responsibly. Set a budget for your betting activities and only wager amounts that you can afford to lose.

Gambling can be addictive, and if you or someone you know is struggling with gambling-related issues, we recommend seeking professional help or contacting relevant support organizations.

By accessing and using the information in this newsletter, you acknowledge that you understand the risks associated with gambling and that you assume full responsibility for any actions you take based on the information provided.

All pages and content within this newsletter are explicitly 18+ only. Gamble Responsibly. Visit www.gamblinghelponline.org.au or call Gambling Help on 1800 858 858.

SUMMARY

Welcome to the December 2023 edition of the Statfreaks Newsletter, where we continue to bring the most insightful data-driven analyses in horse and greyhound racing. This month, our focus is on a comprehensive examination of horse racing statistics. We delve into the correlation between a horse's age and its performance, offering unique perspectives for selecting potential winners. Our analysis also extends to horses in preparation, highlighting how these phases impact their performance in races.

A significant part of our analysis this month centres on horses on “days since last start” and their market pricing. We explore the dynamics behind turnaround time and their effects on performance and odds. Additionally, we unravel the complexities of price movements, identifying key variables that contribute to odds shortening, providing valuable insights for understanding investment strategies.

We also celebrate November's top-performing runners, shedding light on their success and offering pointers that could inform future investment strategies. At Statfreaks, we are dedicated to equipping you with comprehensive and accurate racing data, empowering you to make informed decisions.

Stay ahead in the racing world with our expert insights where data and performance intersect.

Happy Racing!

DO YOU HAVE ANY STATS AND INTEL ON JOCKEYS' RIDES THAT SHORTEN IN THE MARKET?

Presented is a year-to-date analysis for Australian riders, showcasing the average percentage decrease in odds from the Opening Price to the Jump Price, as well as from the 9am Price to the Jump Price.

This data specifically highlights instances where the odds have consistently shortened from their initial offering to the start of the race.

Leading the statistics is Tyler Schiller, whose mounts have seen an average shortening in odds of approximately 79.6%. Close on his heels are Jarrod Fry and Keagan Latham, with average odds shortening of 77.1% and 77.0%, respectively.

William Pike and Aaron Bullock stand out as the only two riders who have consistently achieved a strike rate above 30% with odds that have shortened on their rides.

WHICH TRACKS HAVE THE LOWEST WIN STRIKE RATE WHEN LEADING?

Australian horse racing tracks with the lowest win rates for leaders, all having win strike rates of 21% or below..

The attention is drawn to tracks with subpar performance, where both win and place strike rates are relatively low.

Murray Bridge GH stands out with the lowest win strike rate at 11.0% combined with a modest place strike rate of 29.0%.

Similarly, Pakenham Synthetic and Wangaratta both share a win strike rate of 12.0%, with place strike rates of 32.0% and 35.0% respectively.

These figures indicate that horses leading at the 800-meter mark at these tracks have a lower probability of maintaining their lead to secure a win or place finish, suggesting that at these venues, an early lead does not significantly enhance the chances of finishing in a top position.

HAVE A QUESTION?: WWW.STATFREAKS.COM.AU/CONTACT/

LAY BETTING – BETFAIR

Welcome to lay betting, a unique betting strategy on Betfair. Unlike traditional betting where you bet on an outcome to happen, lay betting allows you to bet against an outcome.

In horse racing, when you lay a horse, you're betting it won't win. If any other horse wins, your bet wins. If the horse you laid wins, your bet loses. Essentially, you're acting as the bookmaker.

The odds in lay betting are reverse of traditional betting. For example, if you lay a horse at odds of 4.0 with a \$10 stake, you'll win \$10 if the horse loses. However, if the horse wins, you'll have to pay out \$30. The liability (the amount you could lose) in lay betting can often be more than the amount you stand to win.

In essence, lay betting allows you to profit not only from picking winners, but also from picking losers. It's a valuable tool that, once mastered, can significantly broaden your betting strategy.

ANALYSIS MODELS

MARKET MOVERS AND DRIFTERS ANALYSIS.

In the context of horse racing, the dynamics of the odds reflect collective investor sentiment and the complex interplay of market conditions.

A 'price drift' denotes a scenario where the odds on a horse lengthen, signalling a dip in investor confidence or a reaction to shifts within the betting landscape, which may suggest a lower probability of the horse's top performance. Conversely, when a horse's price shortens, it means the odds are becoming more favourable, reflecting an aggregation of investments and a bolstered expectation of the horse's chances of success.

Understanding these shifts is fundamental for investors aiming to make informed decisions. It is not merely about recognizing which horse is gaining or losing support but discerning why these movements are happening – be it due to a change in track conditions, public perception, or the late revelation of critical information about the horse's condition or the jockey's strategy.

Our upcoming content will explore these intricacies in detail, providing a deep dive into the results concerning price shorteners and drifters. We will dissect the impact of pivotal variables that influence odds movement, offering investors a nuanced understanding of where the value lies and how to potentially capitalize on these fluctuations for favourable outcomes.

Stay tuned for our in-depth analysis, designed to enhance your investment strategy in the thrilling world of horse racing.

VARIABLES DRIFT AND SHORTEN ANALYSIS.

Top Weight Ranked in Race

Weight Rank	Count	SP Op-Cls Mvt-Ind
1	55006	DRIFT
1	46218	SHORT
1	2925	HOLD

Horses ranked top weight that experienced a price drift: 55,006 instances, which is approximately 52.81% of the total observed cases.

Horses that shortened in price: 46,218 instances, corresponding to about 44.38%.

Horses that held their price: 2,925 instances, representing roughly 2.81%.

These figures continue to suggest that top weight horses are more likely to either drift or shorten in price, with a slight prevalence for drifting. Holding the price remains the least common among the price movements observed.

First-up in a Race

xUP	Count	SP Op-Cls Mvt-Ind
1STUP	36836	DRIFT
1STUP	27136	SHORT
1STUP	1530	HOLD

In the context of horses that are 'first up' (racing for the first time in a season or after a break):

Horses that experienced a price drift: 36,836 instances, which is approximately 56.24% of the total recorded.

Horses that shortened in price: 27,136 instances, about 41.43%.

Horses that held their price: 1,530 instances, making up roughly 2.34%.

This data indicates that 'first up' horses are more likely to have their odds drift than shorten, with a significant majority showing a price drift. The occurrence of price holding is relatively minimal.

Best Rated Statfreake Jockey in Race

JR	Count	SP Op-Cls Mvt-Ind
1	22114	SHORT
1	14085	DRIFT
1	1146	HOLD

When analysing races where the jockey is rated the best in the race according to the Statfreake jockey rating:

Horses that shortened in price: 22,114 instances, making up about 59.22% of the cases.

Horses that experienced a price drift: 14,085 instances, approximately 37.72%.

Horses that held their price: 1,146 instances, which is around 3.07%.

This analysis reveals that **horses ridden by statfreake top-rated jockeys tend to have their prices shorten more often than drift**, indicating a strong investor confidence associated with these jockeys. The least frequent occurrence is the price holding steady.

*Important note:

VARIABLES DRIFT AND SHORTEN ANALYSIS.

Best Rated Statfreaks Trainer in Race

TR	Count	SP Op-Cls Mvt-Ind
1	24652	SHORT
1	22264	DRIFT
1	1471	HOLD

For horses that have the best rated statfreaks trainer rating in a race:

There were 24,652 instances of price shortening, accounting for approximately 50.95% of the total cases. Price drifting occurred 22,264 times, representing around 46.01%. The price held steady in 1,471 instances, which is about 3.04%.

These figures indicate that horses with the statfreaks top-rated trainers have a slightly higher tendency for their prices to shorten rather than drift, with both movements occurring fairly close in frequency. The holding of price is considerably less common compared to the other two movements.

Won Last Start

Win LS	Count	SP Op-Cls Mvt-Ind
1	26352	DRIFT
1	21043	SHORT
1	1422	HOLD

For horses that won their last start:

Price drift was noted in 26,352 instances, making up approximately 53.98% of the cases. Price shortening occurred 21,043 times, accounting for about 43.11%. The price held steady in 1,422 instances, roughly 2.91%.

This analysis suggests that horses with a win in their last start are more likely to experience a drift in price compared to shortening. The frequency of the price holding steady is the least common outcome. This could indicate that despite recent wins, there is still a level of uncertainty among investors that leads to fluctuating odds.

Up in Weight from last start.

Weight Up/Down LS	Count	SP Op-Cls Mvt-Ind
UP	98630	DRIFT
UP	89164	SHORT
UP	5166	HOLD

For horses that are carrying more weight compared to their last start:

Price drift occurred in 98,630 instances, which is about 51.11% of the total number observed. Price shortening was noted in 89,164 instances, approximately 46.21%. The price held steady in 5,166 instances, making up roughly 2.68%.

This data shows that horses going up in weight have a slightly higher tendency to experience a drift in price rather than a shortening. The incidence of prices holding steady is relatively low in comparison to the other two price movements. This could suggest that an increase in weight is a factor that investors consider significant enough to affect a horse's chances, leading to more variable odds.

VARIABLES DRIFT AND SHORTEN ANALYSIS.

7 Day Backup

Days Since LS	Count	SP Op-Cls Mvt-Ind
7	8273	SHORT
7	6961	DRIFT
7	460	HOLD

For horses running on a 7-day backup:

Horses with a price shortening: 8,273 instances, which accounts for approximately 52.71% of the total observed.

Horses experiencing a price drift: 6,961 instances, about 44.35%.

Horses whose price held steady: 460 instances, roughly 2.93%.

This data indicates that horses on a 7-day backup are more likely to have their prices shorten rather than drift or hold, pointing to a pattern where quick returns to racing may influence investor confidence positively. Price holding is notably infrequent in this scenario.

14 Day Backup

Days Since LS	Count	SP Op-Cls Mvt-Ind
14	27941	DRIFT
14	25035	SHORT
14	1423	HOLD

For horses on a 14-day backup:

Price drift occurred in 27,941 instances, representing 51.36% of the total.

Price shortening was noted in 25,035 instances, about 46.02%.

Price holding steady was observed in 1,423 instances, which is 2.62%.

Comparing this to the 7-day backup data:

The 14-day backup sees a slightly lower percentage of price drifts (51.36% vs. 52.71%) and a higher percentage of price shortens (46.02% vs. 44.35%).

The occurrence of price holding is marginally less frequent in the 14-day backup (2.62% vs. 2.93%).

This comparison suggests that the length of the backup period can affect price movements, with the 14-day backup showing a closer balance between drifting and shortening, whereas the 7-day backup shows a higher tendency for shortening. Price holding remains the least common in both periods.

Here's the latest update of greyhounds that have shown strong performance when projected to be among our top 4 ranked runners in a race.

It may be worthwhile to include these runners in your watchlist. Whenever they are scheduled to race, verify whether they appear in our top 4 rankings. If they do, and the market conditions seem favourable, you could potentially leverage a significant advantage.

Filters:

- Data Quality = 100
- Ranked In Top 4 of race
- Year 2023
- Updated: 02/12/2023

*Important note:

- Past performance is not an indicator for future performance.
- Any runner that meets this shortlist, we highly recommend conducting additional form analysis.

JOCKEY/TRAINER REVIEW PROCESS

At the end of each month, we identify the top jockeys and trainers based on our detailed data analysis. These are individuals who have consistently demonstrated exceptional strike rate performance and contributed to profitable outcomes when ranked high on our statfreaks ratings. When a rider/trainer or combo has dropped out of market performance for more than 3 months rolling, they are removed from the tracking table.

You can access a list of top race ranked upcoming runners daily where statfreaks are tracking the rider/trainer and combos from

Web link: www.statfreaks.com.au/top-rider-trainer-performers-tracking-upcoming-aus-56522/

*Requires a valid daily or month subscription

The following sections will present the completed analysis for the past 3 months rolling and provide an update on the tracking table system.

JOCKEY'S (AUD)

The below table displays riders that had a win strike rate equal or above 33% when ranked 1 (Top in race) on our Statfreaks AI ratings and returned a positive profit on turnover over the past 3-months rolling.

These riders are currently in form, and have returned a positive return on investment with the betfair win starting price, and commission factored in.

September 1st to November 30st, 2023

Racing Analytics Expert Form Analyser

OUR METHODOLOGY

Harnessing the Power of the Racing Analytics Expert Form Database Platform.

Our examination of horse racing data is anchored by the Racing Analytics - Expert Form platform, the Statfreaks plugin, and Betfair's rich historical data.

The Racing Analytics platform is our primary tool for investigating the vast array of data from various races. With it, we scrutinize the performance histories of horses, jockeys, and trainers, and dissect diverse variables.

Statfreaks amplifies our analysis, providing advanced statistical capabilities for pattern recognition and predictive modeling. Betfair's historical data offers a broad base for our exploration, contributing a wealth of information.

For those keen on conducting personal research, the platform is accessible via subscription at www.rapro.com.au. Here, you can engage directly with the same data environment we utilize for our analysis and discover your own unique insights.

ENQUIRE NOW

- ✓ 500+ variables pre and post race.
- ✓ Develop your own historical custom-built models.
- ✓ Transform models into shortlisted contenders for future events.
- ✓ Perform backward simulations using Betfair SP Win/Place/Lay.
- ✓ Monitor selections & conduct retrospective analysis.
- ✓ Combine Statfreaks AI data with advanced form analysis, mapping, enhanced statistics and race pricing profiles.
- ✓ Speed, Class, *IVR/Sectional Benchmarking & *Live Yard

* Additional Paid Addon/Subscription

RACING ANALYTICS— BACKWARDS SIMULATION

The RAPRO Expert Form Module lets you create and refine your own models. By exploring pre-race factors, you can develop historical models, then use them for upcoming events to find potential investments efficiently.
